

Svarajya Application - Bug Testing Report

Date: 06-06-2026

Authentication Module

Bug 1

Bug Title: Google login only allows test users, not all Google accounts

Severity: High

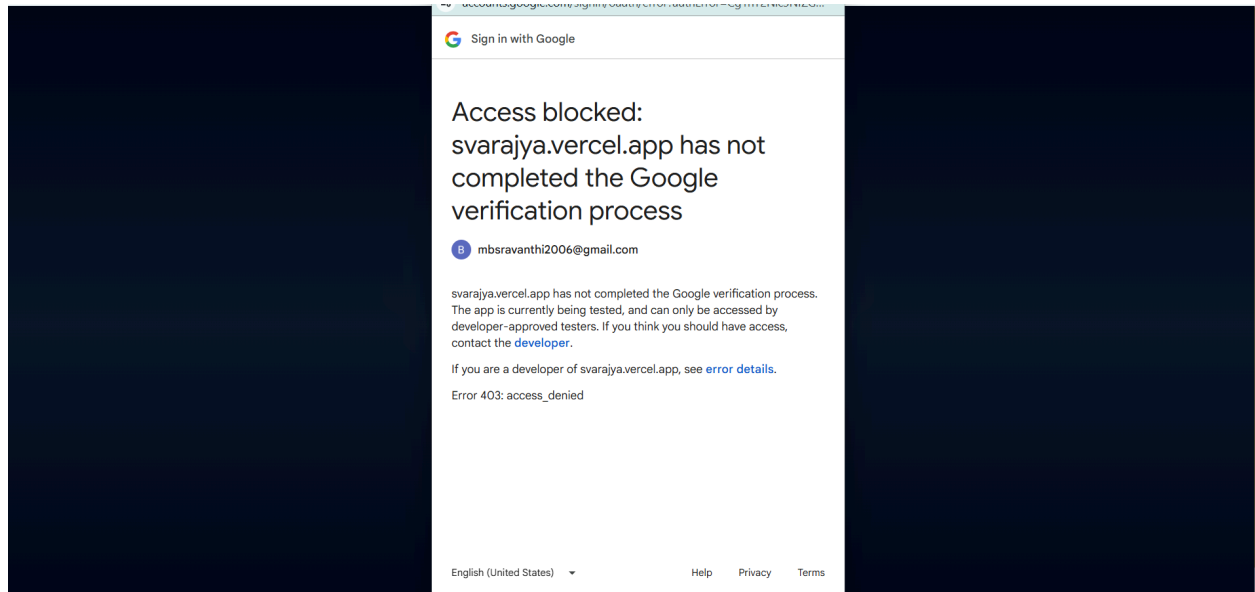

Description: Google login is currently restricted to test users only. When a user tries to login with any Google account not added as a test user, the login fails. To allow all Google accounts, the application needs to be verified in Google Cloud Auth console.

Expected Result: All Google accounts should be able to login successfully.

Actual Result: Only test users added in Google Cloud Console can login. Other users get authentication error.

Impact: Regular users cannot login with Google account. Only developers and test users have access.

Screenshot:

Suggested Fix: Complete the verification process in Google Cloud Auth console to allow all Google accounts to login. Once verified, the restriction will be removed automatically.

Bug 2

Bug Title: Password reset link shows error and redirects without resetting password

Severity: High

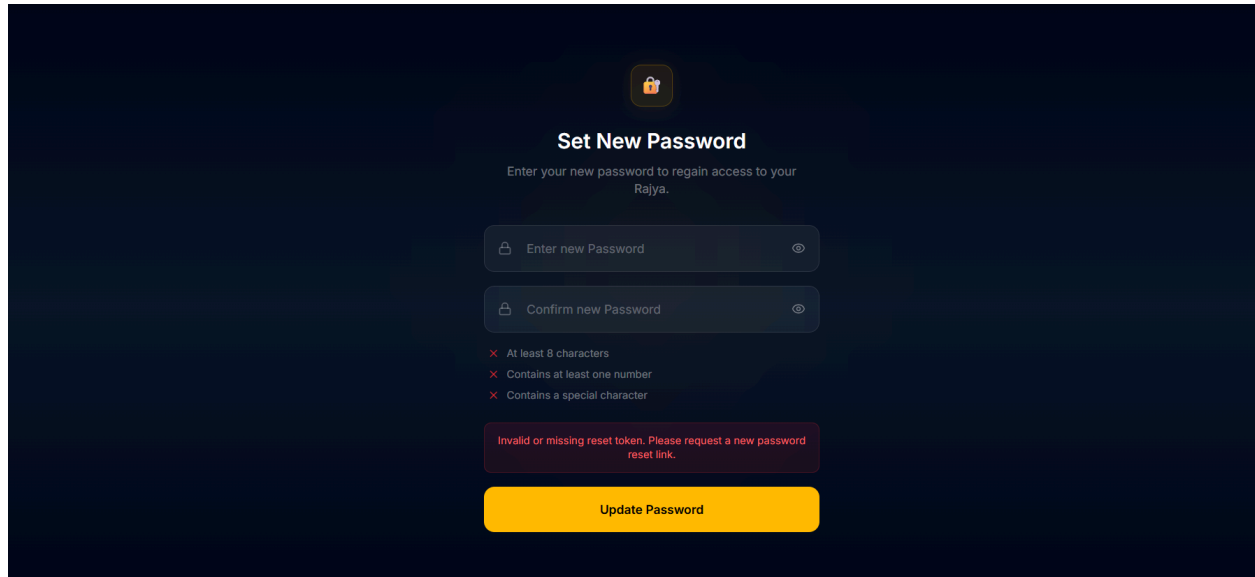

Description: When a user requests a password reset link for an email registered with email/password, the link is received but clicking it shows "Invalid token" error, then automatically logs the user in and redirects to /rajya page without resetting the password.

Expected Result: User should be taken to a password reset page to enter new password. After successful reset, user should be redirected to login page.

Actual Result: Error message "Invalid token, request new link" appears, user is automatically logged in, redirected to /rajya page, and password remains unchanged.

Impact: Password reset functionality is completely broken. Users cannot reset their password.

Screenshot:

Suggested Fix: Fix token validation in password reset flow. Ensure token is properly verified before allowing password change. Remove automatic login during reset flow.

Onboarding Module

Bug 3

Bug Title: Hide button spacing issue

Severity: Low

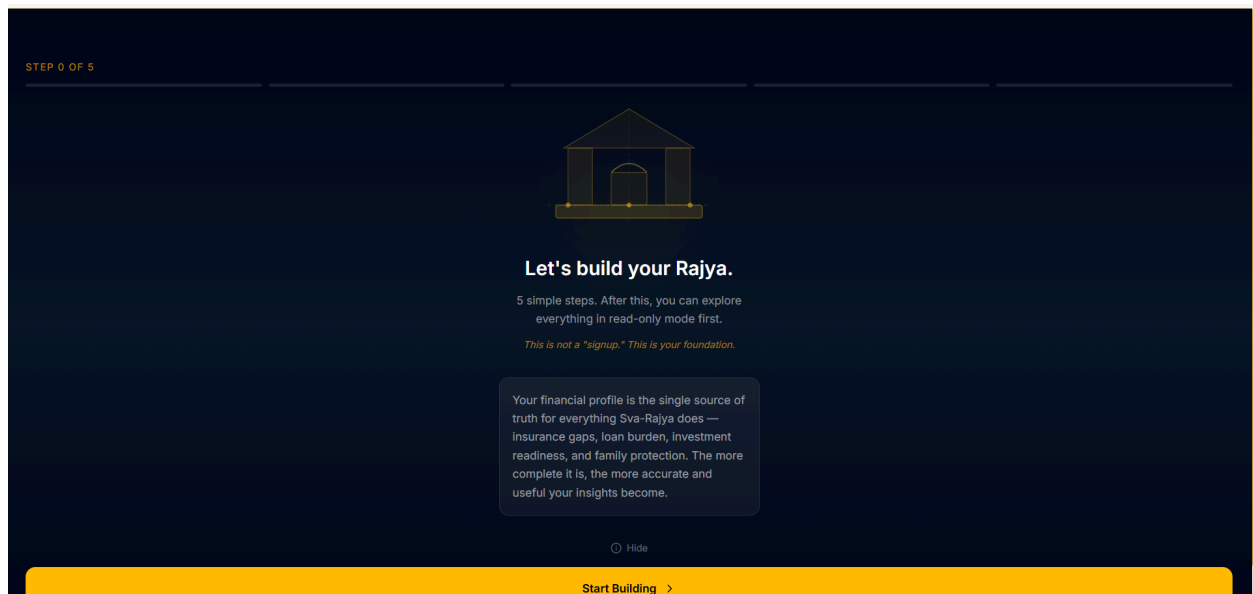

Description: The hide button on the onboarding page has incorrect spacing or alignment, making it look out of place or improperly positioned.

Expected Result: Hide button should have proper spacing and alignment matching the overall design.

Actual Result: Hide button spacing is incorrect.

Impact: Minor UI issue affecting visual consistency.

Screenshot:

Suggested Fix: Adjust CSS spacing (margin/padding) for the hide button to align properly with the surrounding elements.

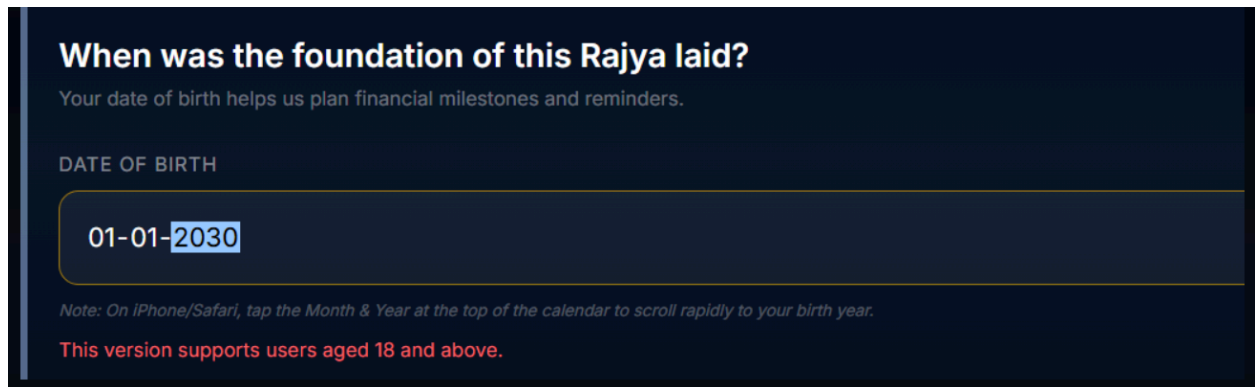

Bug 4

Bug Title: Invalid error message or no proper message shown when user enters future date of birth

Severity: Medium

Description: When user enters a future date of birth during onboarding, the system does not display a proper error message. The app should show a clear message that DOB cannot be in the future.

Screenshot:

Expected Result: Clear error message: "Date of birth cannot be in the future."

Actual Result: Improper error msg "This version supports users aged 18 and above".

Impact: User confusion; validation not clearly communicated.

Suggested Fix: Add proper validation message for future date of birth.

Bug 5

Bug Title: Mobile OTP verification using static code 1234 instead of sending actual OTP

Severity: Medium

Description: During mobile number verification, the system uses static OTP "1234" for testing instead of sending an actual OTP to the user's mobile number. This works in development mode but needs to be integrated with a real SMS service for production.

Expected Result: Actual OTP should be sent to the entered mobile number via SMS service.

Actual Result: System accepts any OTP as "1234" or does not send actual SMS.

Impact: Mobile verification is not functional in production; users cannot verify their mobile numbers.

Suggested Fix: Integrate with SMS service provider (Twilio, AWS SNS, or any other) to send real OTP to mobile numbers. Remove static OTP fallback in production mode.

Module 1: Sthapana (Foundation)

Bug 6

Bug Title: Duplicate save buttons in add family member form - "Link to profile" and "Save and continue" both displayed

Severity: Low

Description: When adding a family member, both "Link to profile" and "Save and continue" buttons are displayed. Only one button "Link to profile" should be shown. The "Save and continue" button needs to be removed.

Screenshot:

The screenshot shows a dark-themed form titled "Add to Mandal" with a close button (X) in the top right corner. The form contains the following elements:

- A text input field with the value "Vasanthi M".
- A date input field showing "01-01-2000" with a calendar icon.
- A dropdown menu for "Spouse (Dampati)" with a downward arrow.
- A text input field for "Mobile No. (10 digits)".
- A text input field for "Email ID (@gmail.com)".
- A toggle switch for "Dependent financially?" which is currently turned off.
- A section labeled "Rajya Access Level" containing a dropdown menu with "Executor" selected and a downward arrow.
- A button labeled "Link to Profile" in orange text.
- A large orange button at the bottom labeled "Save & Continue (0/5 members)".

Expected Result: Only "Link to profile" button should be visible.

Actual Result: Two buttons are displayed - "Link to profile" and "Save and continue".

Impact: UI inconsistency and user confusion.

Suggested Fix: Remove the "Save and continue" button from the add family member form. Keep only the "Link to profile" button.

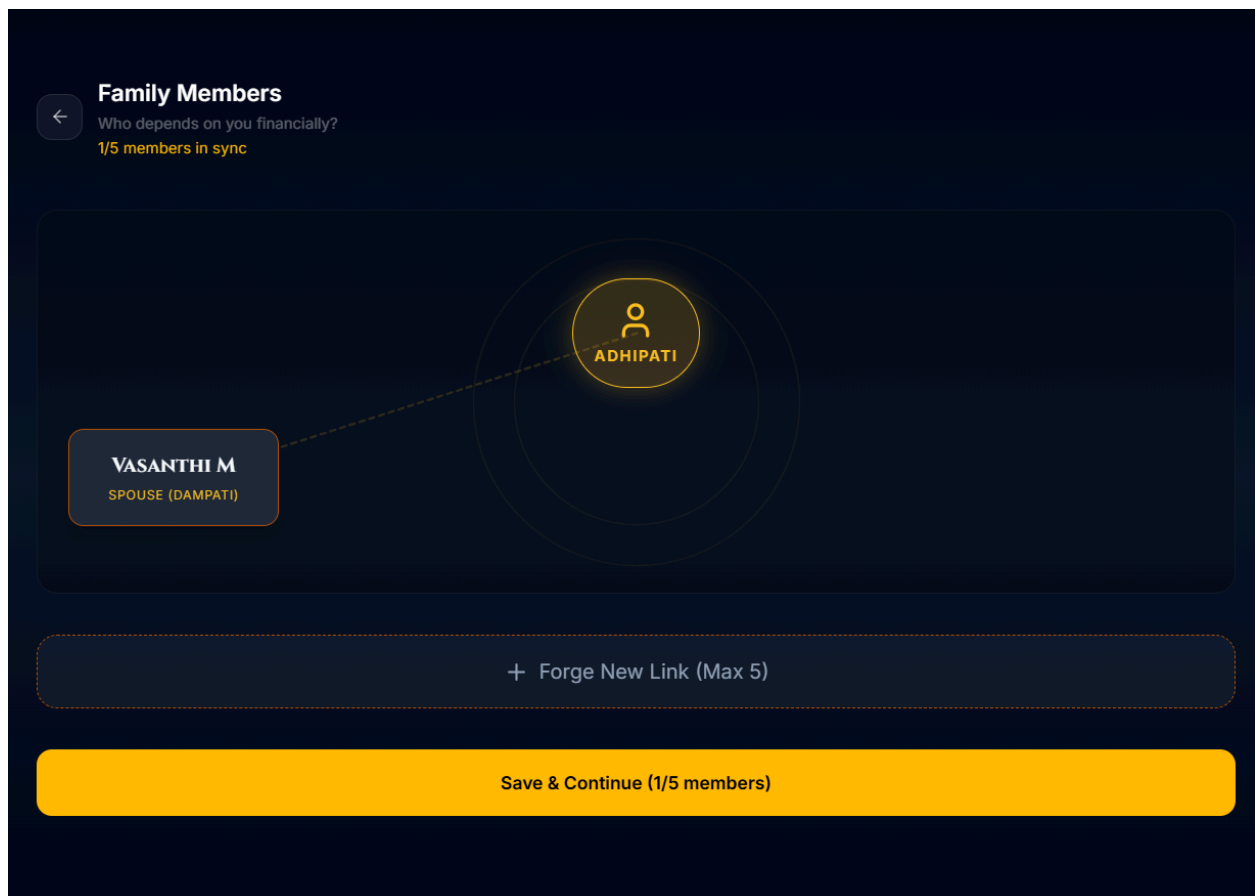

Bug 7

Bug Title: Duplicate buttons displayed after adding family member - "Forge new link button" and "Save and continue" both shown

Severity: Low

Description: After adding a family member, both "Forge new link button" and "Save and continue" buttons are displayed together. Only one button "Forge new link button" should be shown.

Screenshot:

Expected Result: Only "Forge new link button" should be visible after adding family member.

Actual Result: Two buttons displayed - "Forge new link button" and "Save and continue".

Impact: UI inconsistency and user confusion.

Suggested Fix: Remove the "Save and continue" button. Keep only the "Forge new link button".

Bug 8

Bug Title: Email field only accepts @[gmail.com](#) addresses, should accept all email domains

Severity: Medium

Description: When adding a family member, the email field only accepts email addresses with @[gmail.com](#) domain. It should accept all valid email domains like @[yahoo.com](#), @[outlook.com](#), @[labdox.in](#), etc.

Screenshot:

The screenshot shows a dark-themed form titled "Add to Mandal" with a close button (X) in the top right corner. The form contains the following fields and elements:

- A text input field containing "Vasanthi M".
- A date input field with a placeholder "dd-mm-yyyy" and a calendar icon.
- A dropdown menu labeled "Spouse (Dampati)" with a downward arrow.
- A text input field for "Mobile No. (10 digits)".
- A text input field for an email address containing "vasanthi@labdox.in". Below this field, a red error message states: "Only @gmail.com email addresses are allowed".
- A toggle switch for "Dependent financially?" which is currently turned off.
- A section header "Rajya Access Level" followed by a dropdown menu showing "None" with a downward arrow.
- A large button at the bottom labeled "Link to Profile".

Expected Result: All valid email formats should be accepted regardless of domain.

Actual Result: Only @gmail.com addresses are accepted.

Impact: Users with non-Gmail addresses cannot add family members.

Suggested Fix: Update email validation regex to accept all valid email domains, not just gmail.com.

Bug 9

Bug Title: Duplicate email addresses accepted for family members; should prevent already registered emails

Severity: Medium

Description: When adding a family member, the system accepts email addresses that are already registered as a user in the database. It should prevent duplicate emails or show a warning that this email is already associated with another user.

Expected Result: System should display an error message: "This email is already registered. Please use a different email address."

Actual Result: Duplicate emails are accepted without any warning or error.

Impact: Multiple family members can have the same email, causing confusion and potential data integrity issues.

Suggested Fix: Add validation to check if email already exists in users table before allowing family member creation. Display appropriate error message if duplicate found.

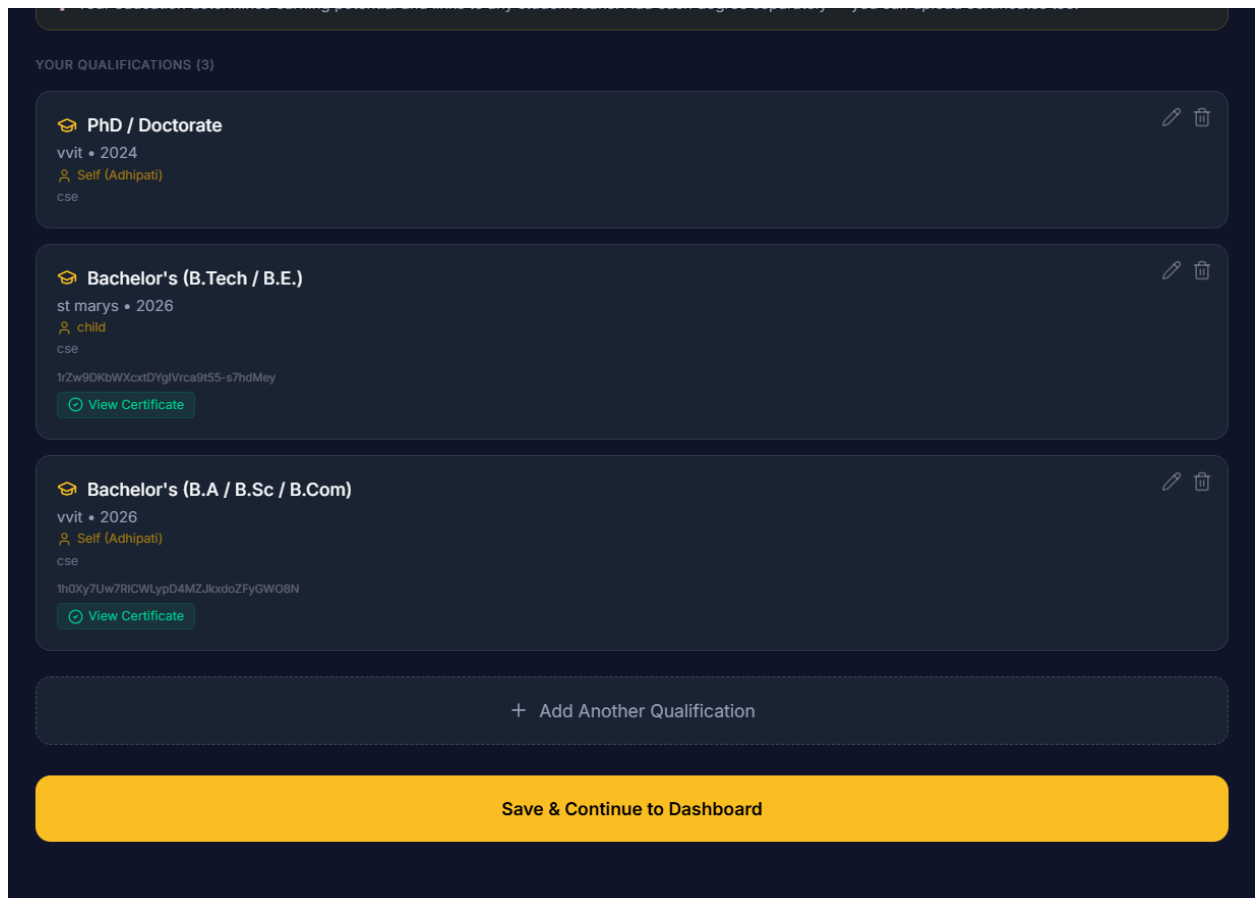

Bug 10

Bug Title: Multiple buttons displayed on education page - should show only "Add Qualification" button initially

Severity: Low

Description: On the education page, both "Add another qualification" and "Save & Continue to Dashboard" buttons are displayed together. Initially, only the "Add Qualification" button should be shown. After user adds a qualification, then the save button should appear.

Screenshot:

Expected Result: Initially only "Add Qualification" button visible. Save button appears when user enter the Qualification.

Actual Result: Both buttons displayed simultaneously.

Impact: UI confusion; inconsistent user flow.

Suggested Fix: Show only "Add Qualification" button initially. Save button appears when user enter the Qualification

Bug 11

Bug Title: Google Drive link redirects to Pehchaan module instead of staying on Education page

Severity: Medium

Description: When a user tries to link Google Drive to upload documents on the Education add/edit page, after successfully linking Google Drive, the user is redirected to the Pehchaan module instead of returning to the Education page.

Expected Result: After linking Google Drive, the user should remain on the Education page to continue adding/editing education details and upload the document.

Actual Result: User is redirected to Pehchaan module (Digital Identity / KYC Vault) instead of staying on the Education page.

Impact: User loses progress on the Education form and has to navigate back, causing frustration and potential data loss.

Suggested Fix: Update the Google Drive OAuth callback redirect URL to return to the Education page instead of redirecting to Pehchaan module. The redirect should preserve the user's current context and form state.

Bug 12

Bug Title: Education loan toggle status not saving to database

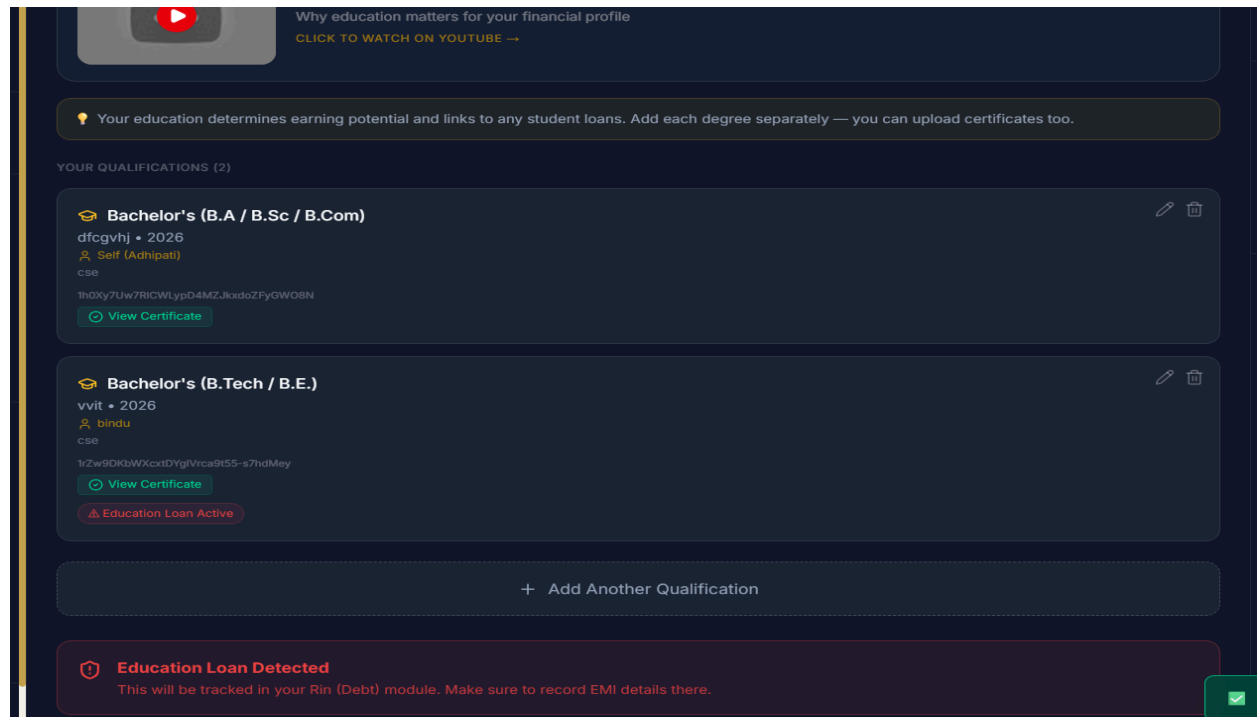

Severity: Medium

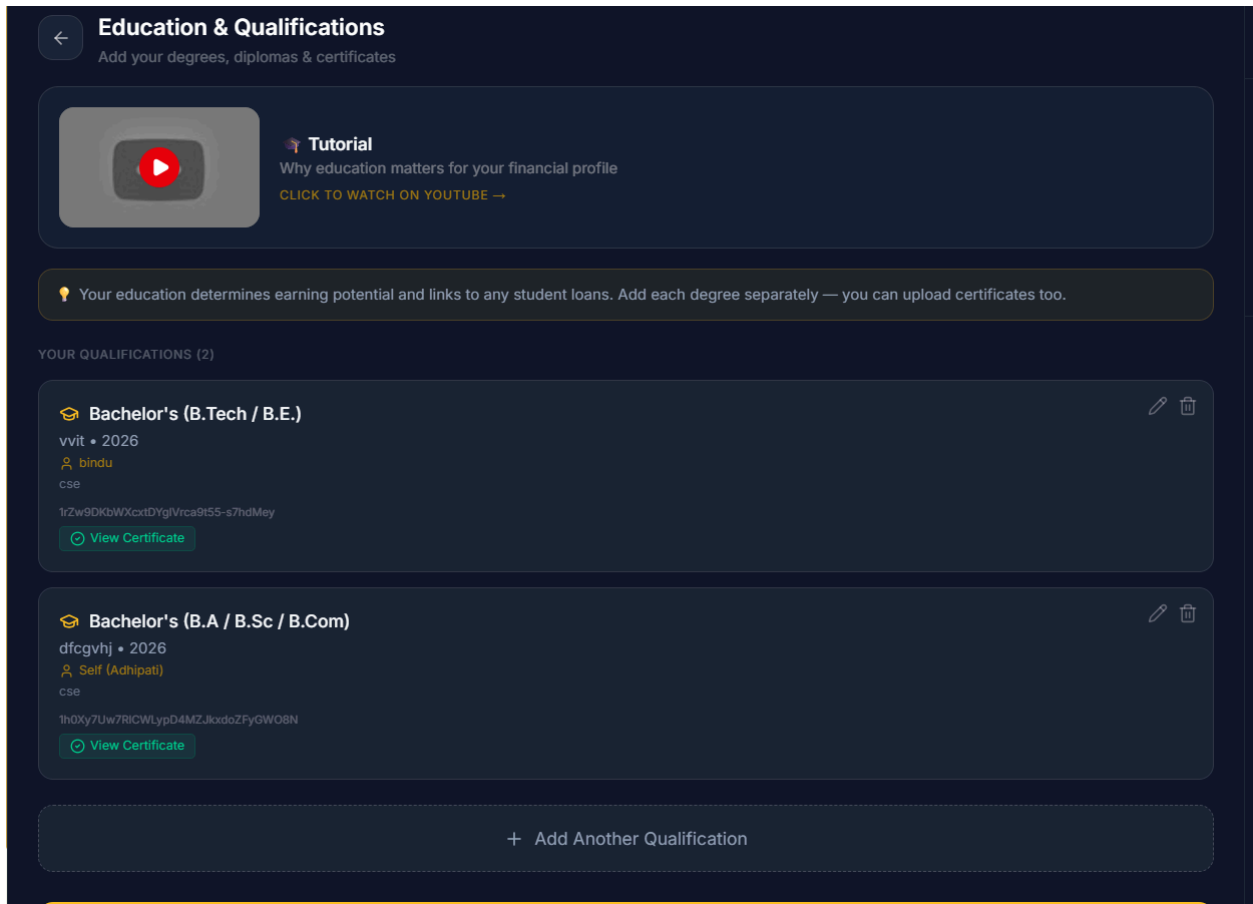

Description: When user enables the Education Loan toggle in the Education section and adds education details, the loan status shows correctly on the page after saving. However, after refreshing the page, the education loan indicator disappears, indicating the loan status is not being saved to the database.

Expected Result: The education loan status should persist after page refresh and show "Education Loan Active" consistently.

Actual Result: After page refresh, the education loan indicator disappears. The loan status is not saved to the database.

Screenshot:

Suggested Fix: Ensure the `educationLoanActive` field is included in the API request when saving education record. Update the database schema if needed and ensure the GET API returns the loan status correctly. Also verify the frontend loads the saved status on page refresh.

Bug 13

Bug Title: Document does not move to new family member folder in Google Drive when updating certificate ownership

Severity: Medium

Description: When editing an educational qualification and changing the "Certificate Belongs To" field to another family member, the database updates

correctly. However, the uploaded document (certificate) stored in Google Drive remains in the old family member's folder and does not move to the new family member's folder.

Expected Result: When certificate ownership is changed to another family member, the document should be moved from old family member's folder to the new family member's folder in Google Drive.

Actual Result: Only database is updated. The document remains in the old family member's Google Drive folder.

Impact: Documents become disorganized and associated with the wrong family member. This creates confusion during document management and retrieval.

Save Changes

Suggested Fix: When updating education record with a different `familyMemberId`, implement logic to move the associated document from old folder to new folder in Google Drive. Update the `vaultFileId` reference if needed. This should work similar to the document move functionality in Nidhi Vault module.

Bug 14

Bug Title: Education loan toggle missing in edit qualification page

Severity: Medium

Description: The education loan toggle is available when adding a new education qualification, but it is missing when editing an existing qualification. Users cannot modify the loan status after creation.

Expected Result: Education loan toggle should be visible and editable in both Add and Edit pages.

Actual Result: Education loan toggle is not present in the edit page.

Impact: Users cannot update the loan status for existing education qualifications.

Screenshot:

The screenshot shows a dark-themed 'Edit Qualification' form. At the top left, there is a back arrow icon and the title 'Edit Qualification' with a subtitle 'BACHELOR'S (B.TECH / B.E.)'. The form contains several input fields: 'Degree / Certificate *' with the value 'Bachelor's (B.Tech / B.E.)', 'Institution / University *' with the value 'st marys', 'Year' with the value '2026', 'Specialization' with the value 'cse', and 'Certificate Belongs To' with the value 'lakshmi'. Below these fields is a section titled 'CERTIFICATE ATTACHMENT' with two buttons: 'Upload New' and 'Select Vault File'. Under 'Select Vault File', there is a card for 'Google Drive Document' with a 'Remove' button. At the bottom of the form is a large yellow button labeled 'Save Changes'.

Suggested Fix: Add the Education Loan toggle field to the edit qualification form, pre-populated with the saved value from database.

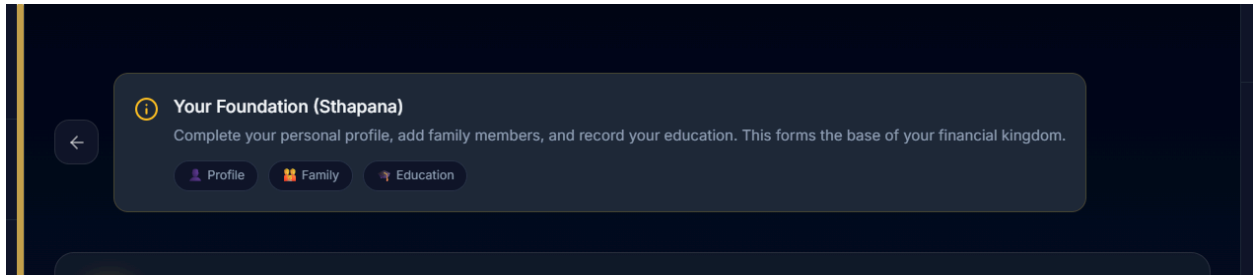

Bug 15

Bug Title: Foundation card UI inconsistency - layout or spacing issues

Severity: Low

Description: The Your Foundation (Sthapana) card on the dashboard has inconsistent UI - the layout, spacing, or alignment of elements is not proper compared to other module cards.

Screenshot:

Expected Result: Foundation card should have consistent spacing, alignment, and styling matching other module cards.

Actual Result: UI is inconsistent - possible issues with padding, margins, or element positioning.

Impact: Visual inconsistency affects overall user experience and professional appearance.

Suggested Fix: Review and fix CSS styling for the Foundation card to match the design system of other module cards. Ensure consistent padding, margins, and alignment.

Module 3 - Kunji

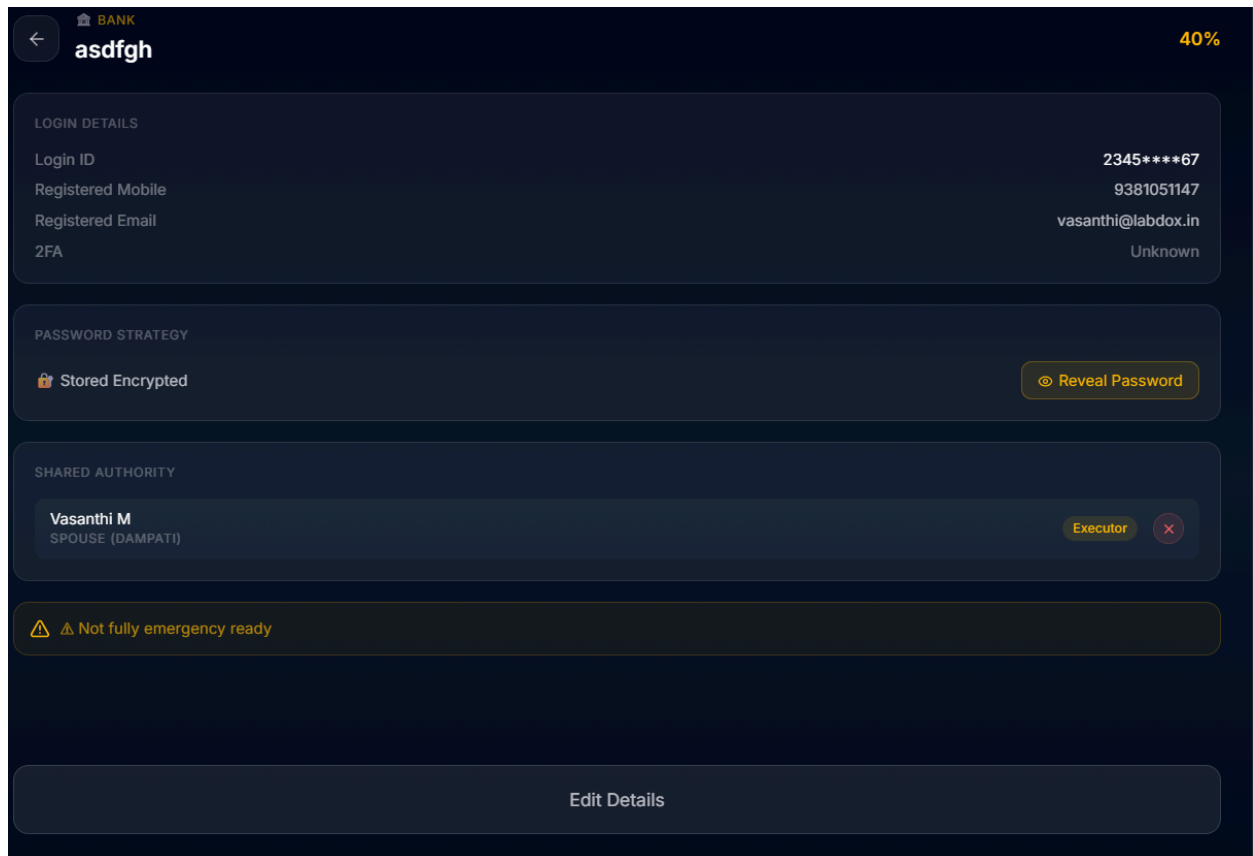

Bug 16

Bug Title: Reveal Password button does nothing when clicked

Severity: Medium

Description: When viewing a portal with stored encrypted password, the "Reveal Password" button is displayed but clicking it does nothing. It should prompt for master passphrase and then display the decrypted password.

Screenshot:

Expected Result: Clicking "Reveal Password" should prompt for master passphrase and then reveal the stored password.

Actual Result: Nothing happens when button is clicked.

Impact: User cannot view their stored encrypted passwords, defeating the purpose of storing them.

Suggested Fix: Implement the reveal password functionality. On click, show a modal asking for master passphrase, decrypt the password, and display it to the user.

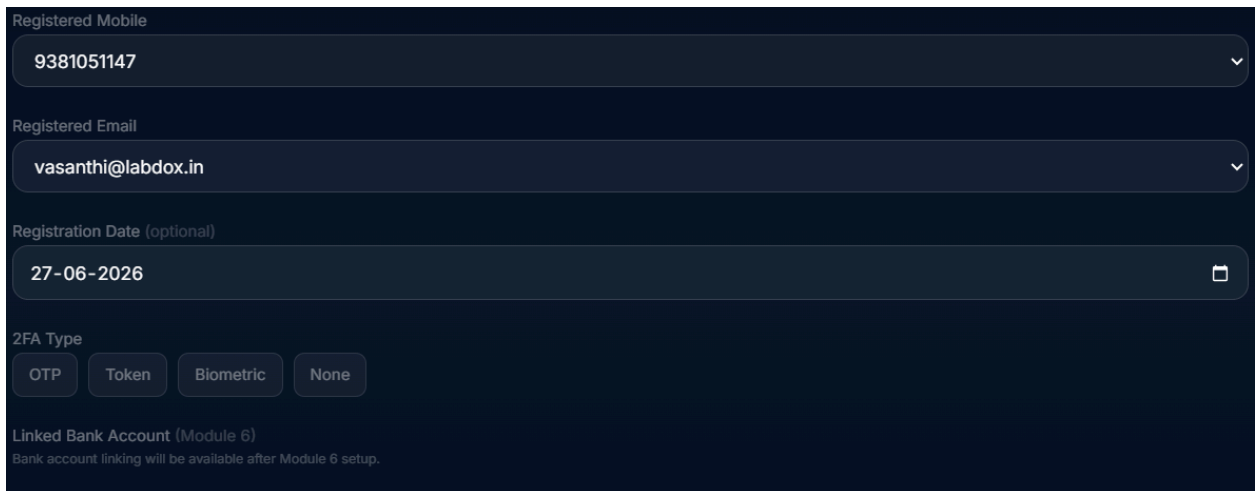

Bug 17

Bug Title: Registration date accepts future dates without validation error

Severity: Low

Description: When adding a new portal, the registration date field accepts future dates. The system should display an error message when user selects a registration date in the future.

Screenshot:

The screenshot shows a registration form with the following fields and options:

- Registered Mobile:** A dropdown menu showing the value "9381051147".
- Registered Email:** A dropdown menu showing the value "vasanthi@labdox.in".
- Registration Date (optional):** A date picker showing the value "27-06-2026".
- 2FA Type:** Four buttons labeled "OTP", "Token", "Biometric", and "None".
- Linked Bank Account (Module 6):** A section with the text "Bank account linking will be available after Module 6 setup."

Expected Result: Error message: "Registration date cannot be in the future."

Actual Result: Future date is accepted without any validation error.

Impact: Incorrect data entry; user may mistakenly set future registration date.

Suggested Fix: Add client-side validation to prevent future dates in registration date field. Display appropriate error message.

Module 4 - Raksha

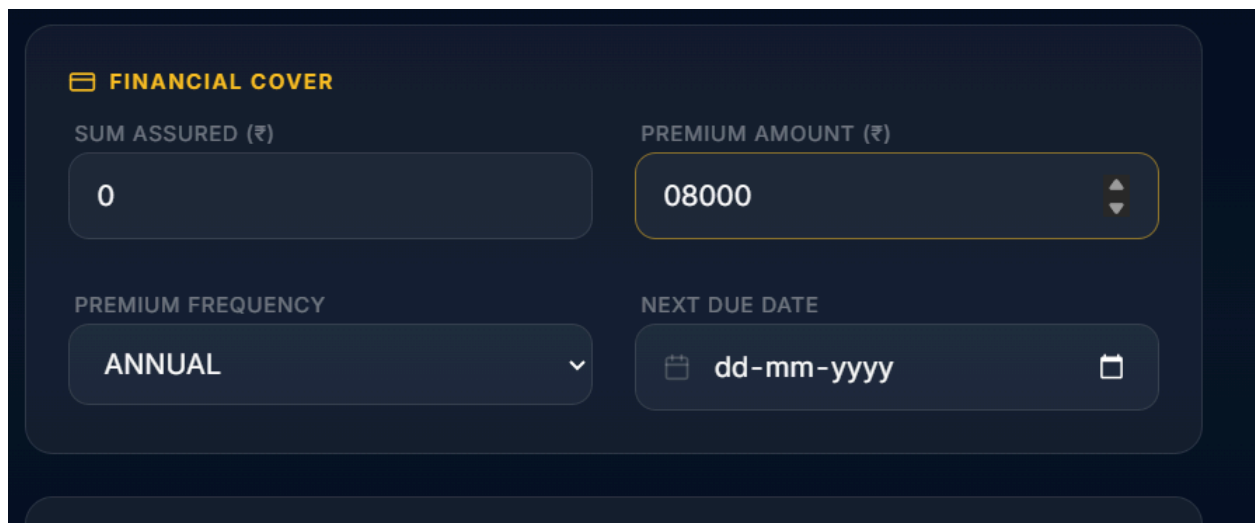

Bug 18

Bug Title: Number input fields show default "0" that cannot be deleted and rupee symbol missing

Severity: Medium

Description: In the add insurance policy form, the Sum Assured and Premium Amount fields display a default "0" that the user cannot delete unless they enter another amount. When entering a new amount, it appends to the "0" (e.g., typing 8000 shows "08000"), requiring the user to manually delete the leading zero. Also, the Indian Rupee symbol (₹) is missing from these fields.

Screenshot:

The screenshot displays a dark-themed form titled "FINANCIAL COVER". It contains four input fields arranged in a 2x2 grid:

- SUM ASSURED (₹):** A text input field containing the value "0".
- PREMIUM AMOUNT (₹):** A text input field containing the value "08000". It features a vertical scrollbar on the right side.
- PREMIUM FREQUENCY:** A dropdown menu with "ANNUAL" selected and a downward arrow icon.
- NEXT DUE DATE:** A date input field showing the placeholder "dd-mm-yyyy" with a calendar icon on the right.

Expected Result: Fields should be empty by default or allow clearing of default value. Rupee symbol should be displayed. Typing should not create leading zeros.

Actual Result: Default "0" cannot be cleared; typing creates leading zeros; no rupee symbol.

Impact: Poor user experience and incorrect data entry.

Suggested Fix: Remove default "0" value or allow clearing. Add ₹ symbol prefix. Fix number input handling to prevent leading zeros.

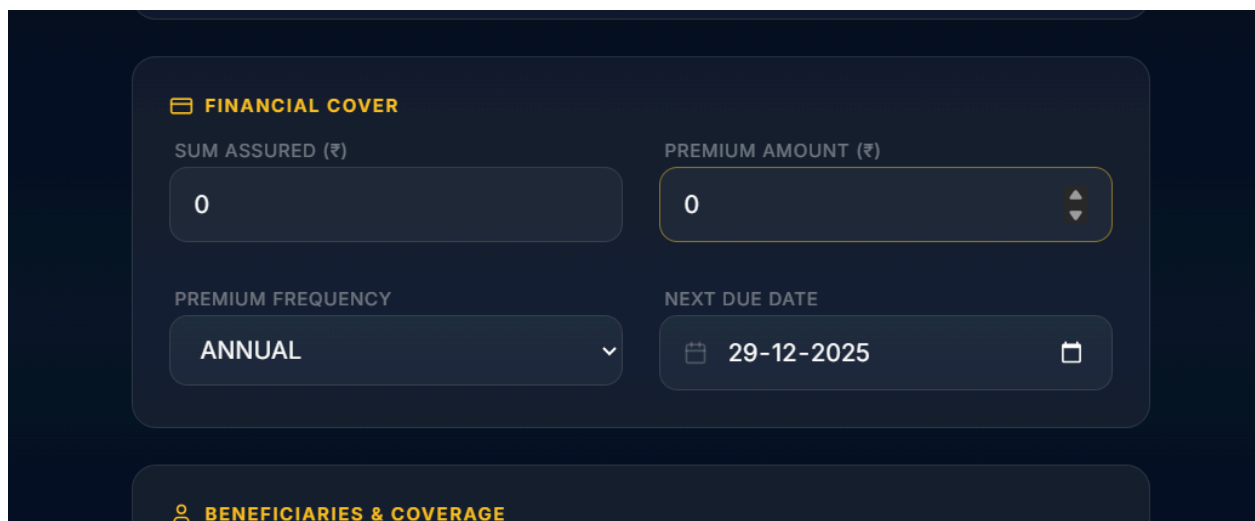

Bug 19

Bug Title: Next due date field accepts past dates without validation

Severity: Medium

Description: When adding a new insurance policy, the "Next Due Date" field accepts past dates. The system should validate that the next due date cannot be in the past and should display an appropriate error message.

Screenshot:

The screenshot displays a dark-themed form titled "FINANCIAL COVER". It contains four input fields arranged in a 2x2 grid:

- SUM ASSURED (₹)**: A text input field containing the value "0".
- PREMIUM AMOUNT (₹)**: A numeric input field with a spinner, containing the value "0".
- PREMIUM FREQUENCY**: A dropdown menu with "ANNUAL" selected.
- NEXT DUE DATE**: A date picker field showing "29-12-2025".

Below the "FINANCIAL COVER" section, the header for the next section, "BENEFICIARIES & COVERAGE", is partially visible.

Expected Result: Error message: "Next due date cannot be in the past."

Actual Result: Past dates are accepted without any validation error.

Impact: Incorrect data entry; user may set expired due dates for insurance policies.

Suggested Fix: Add validation to prevent past dates in next due date field. Display error message when user selects a date earlier than today.

Bug 20

Bug Title: Document upload field missing in add insurance form, but present in edit/view page

Severity: Low

Description: When adding a new insurance policy, there is no option to upload a document (policy document, schedule, etc.). However, when viewing or editing an existing policy, the document upload option appears. This is inconsistent.

LINK DOCUMENT

No document attached.

Add Document

PROTECTED SOULS

No specific members linked to this shield.

Expected Result: Document upload field should be available in both add and edit pages for consistency.

Actual Result: Document upload field is missing in add insurance form.

Impact: User cannot upload policy documents at the time of policy creation; must save and then edit to add documents.

Suggested Fix: Add document upload field to the add insurance form, similar to the edit page. Ensure the uploaded document is linked to the policy record.

Bug 21

Bug Title: Uploaded insurance document cannot be viewed - Google Drive file not found

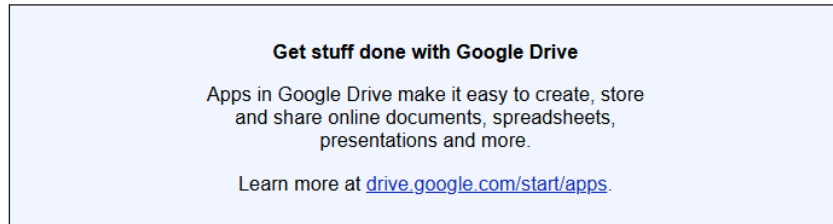

Severity: Medium

Description: When user uploads a document for an insurance policy in the edit/view page, the document uploads automatically and when trying to view it, Google Drive returns a "file does not exist" error. The file reference is saved but the actual file is not accessible.

Screenshot:

Sorry, the file you have requested does not exist.

Make sure that you have the correct URL and the file exists.

Expected Result: Uploaded document should be accessible and viewable/downloadable from the insurance policy page.

Actual Result: Google Drive shows "Sorry, the file you have requested does not exist" error.

Impact: User cannot view or access uploaded insurance documents, defeating the purpose of document storage.

Suggested Fix: Check Google Drive upload logic to ensure the file is properly saved and the file ID/reference is correctly stored. Verify the file permissions and sharing settings. Ensure the download/view URL is correctly generated. Test with different file types and sizes.

Module 6 - Pravah

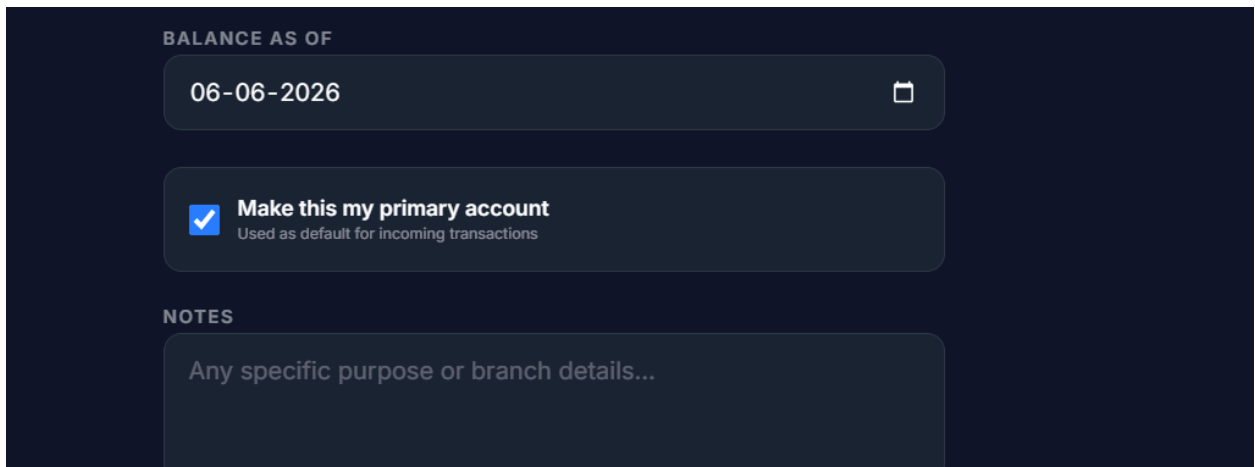

Bug 22

Bug Title: Multiple bank accounts can be marked as primary without validation or warning

Severity: Medium

Description: When user adds a bank account and marks it as primary, then adds another account and also marks it as primary, the system accepts both as primary. Only one account should be allowed as primary. The system should show an error message.

Screenshot:

The screenshot shows a dark-themed user interface for managing bank accounts. At the top, there is a section titled 'BALANCE AS OF' with a date input field containing '06-06-2026' and a calendar icon. Below this is a checkbox labeled 'Make this my primary account' with the subtitle 'Used as default for incoming transactions'. The checkbox is checked. At the bottom, there is a 'NOTES' section with a text input field containing the placeholder text 'Any specific purpose or branch details...'.

Expected Result: Only one bank account can be primary at a time. Proper error message should be shown.

Actual Result: Multiple accounts can be marked as primary simultaneously.

Impact: Data inconsistency; confusion about which account is truly primary.

Suggested Fix: When marking an account as primary, show validation message preventing multiple primary accounts.

Module 7 - Rin

Bug 23

Bug Title: Start date accepts future dates without validation error

Severity: Medium

Description: When adding a new loan, the start date field accepts future dates. The system should validate that the start date cannot be in the future and display an appropriate error message.

Screenshot:

The screenshot shows a loan creation form with the following fields and values:

PRINCIPAL AMOUNT	OUTSTANDING
₹ 233	₹ 2

MONTHLY EMI	INTEREST RATE (%)
₹ 0	8.5

TENURE (MONTHS)	START DATE
e.g. 120	05-09-2026

At the bottom of the form is a large orange button labeled "Create Loan Account". Below the button is a small information icon and a note: "Data is used to calculate your EMI burden ratio and financial health score. All data is encrypted and private."

Expected Result: Error message: "Start date cannot be in the future."

Actual Result: Future date is accepted without any validation error.

Impact: Incorrect data entry; user may set loan start date in the future, affecting EMI calculations and analytics.

Suggested Fix: Add validation to prevent future dates in start date field. Display error message when user selects a date later than today.

Bug 24

Bug Title: Document upload field missing in add loan form, but present in edit page

Severity: Low

Description: When adding a new loan, there is no option to upload a document (loan agreement, sanction letter, etc.). However, when viewing or editing an existing loan, the document upload option appears. This is inconsistent.

Screenshot:

The screenshot shows a dark-themed form for creating a loan account. It features six input fields arranged in a 3x2 grid. The first row contains 'PRINCIPAL AMOUNT' with a value of ₹ 233 and 'OUTSTANDING' with a value of ₹ 2. The second row contains 'MONTHLY EMI' with a value of ₹ 0 and 'INTEREST RATE (%)' with a value of 8.5. The third row contains 'TENURE (MONTHS)' with a value of e.g. 120 and 'START DATE' with a value of 05-09-2026. Below the form is a large orange button labeled 'Create Loan Account'. At the bottom, there is a small information icon and a note: 'Data is used to calculate your EMI burden ratio and financial health score. All data is encrypted and private.'

PRINCIPAL AMOUNT	OUTSTANDING

 Save Changes

 Updating your loan status to 'Closed' will remove it from active EMI calculations and reflect in your debt-free progress.

Expected Result: Document upload field should be available in both add and edit pages for consistency.

Actual Result: Document upload field is missing in add loan form.

Impact: User cannot upload loan documents at the time of loan creation; must save and then edit to add documents.

Suggested Fix: Add document upload field to the add loan form, similar to the edit page. Ensure the uploaded document is linked to the loan record.

Bug 25

Bug Title: Uploaded loan document cannot be viewed - Google Drive file not found

Severity: Medium

Description: When user uploads a document for a loan in the edit page, the document uploads but when trying to view it, Google Drive returns a "file does not exist" error. The file reference is saved but the actual file is not accessible.

Screenshot:

Sorry, the file you have requested does not exist.

Make sure that you have the correct URL and the file exists.

Get stuff done with Google Drive

Apps in Google Drive make it easy to create, store
and share online documents, spreadsheets,
presentations and more.

Learn more at drive.google.com/start/apps.

Expected Result: Uploaded document should be accessible and viewable/downloadable from the loan page.

Actual Result: Google Drive shows "Sorry, the file you have requested does not exist" error.

Impact: User cannot view or access uploaded loan documents.

Suggested Fix: Check Google Drive upload logic for loan module. Ensure the file is properly saved and the file ID is correctly stored. Verify the download URL generation. This is similar to Bug 24 in Insurance module, so fix should be applied consistently across all modules.

Bug 26

Bug Title: End date field missing in add/edit loan form but displayed in view page

Severity: Low

Description: When adding or editing a loan, there is no field to enter the loan end date. However, the view page displays an "End Date" field showing "N/A". The user should be able to enter the loan end date during creation or editing.

Expected Result: End date field should be available in both add and edit forms.

User should be able to enter the expected loan end date.

Actual Result: No end date field in add/edit form, but displayed in view page.

Impact: User cannot set or update the loan end date. The view page shows incomplete data.

Suggested Fix: Add "End Date" field to the add and edit loan forms. Calculate end date automatically based on start date and tenure, or allow manual entry. Ensure the field is saved to database and displayed correctly in view page.

Module 8 - Vyaya

Bug 27

Bug Title: Expense date accepts future dates without validation

Severity: Medium

Description: When adding an expense, the date field accepts future dates.

Expenses should only be recorded for past or present dates. The system should validate that expense date cannot be in the future.

Screenshot:

The screenshot shows the 'Add Expense' screen of a mobile application. At the top, there is a back arrow and the title 'Add Expense' with a subtitle 'Quick entry. Details optional.' Below this is a quote: 'Real clarity begins when the drain is measured.' A tutorial video thumbnail is displayed with the text 'Tutorial: How to track expenses effectively' and a link 'CLICK TO WATCH ON YOUTUBE →'. The 'Date' field is set to '26-06-2026'. The 'Amount' field is '₹ 0'. The 'Category' field is set to 'Other' (default). Below the category field is a search bar 'Search categories...' and a grid of category buttons: Household, Food & Dining, Rent / EMI, Utilities, Education, Medical, Travel, Insurance Premium, Entertainment, Subscriptions, Miscellaneous, and Other. The 'Payment Mode' field is partially visible at the bottom.

Expected Result: Error message: "Expense date cannot be in the future."

Actual Result: Future date is accepted without any validation error.

Impact: Incorrect data entry; future expenses cannot be accurate and will affect expense analytics and budgeting.

Suggested Fix: Add validation to prevent future dates in expense date field.

Display error message when user selects a date later than today.

Bug 28

Bug Title: Recurring expense frequency not saving to database

Severity: Medium

Description: When user marks an expense as recurring and selects a frequency (monthly/quarterly/annual), the frequency value is not being saved to the database. Only the isRecurringflag saved, but the actual frequency is not stored.

Screenshot: [Attach screenshot showing frequency selected]

Expected Result: The selected frequency (monthly/quarterly/annual) should be saved database.

Actual Result: Frequency field is not saved; column remains NULL.

Impact: Recurring expenses cannot be properly tracked or processed for future months without knowing the frequency.

Suggested Fix: Update the expense API to include frequency field in the create/update payload. Ensure the frontend sends the selected frequency value.

Bug 29

Bug Title: Last used date accepts future dates and next renewal date accepts past dates without validation

Severity: Medium

Description: When adding or editing a subscription, the "Last Used Date" field accepts future dates (should be past/present only), and the "Next Renewal Date" field accepts past dates (should be future/present only). Proper date validations are missing.

Screenshot:

Expected Result:

- Last Used Date: Error "Last used date cannot be in the future"
- Next Renewal Date: Error "Next renewal date cannot be in the past"

Actual Result: Both invalid dates are accepted without any validation error.

Impact: Incorrect data entry; subscription tracking and renewal reminders become inaccurate.

Suggested Fix: Add validations to prevent future dates in "Last Used Date" and past dates in "Next Renewal Date". Display appropriate error messages. Also add alert logic for dormant subscriptions (last used > 90 days) and upcoming renewals (within 7 days).

Module 9 - Mitra

Bug 30

Bug Title: Last Review/Update Date accepts future dates without validation

Severity: Medium

Description: In the Will & Succession page, the "Last Review/Update Date" field accepts future dates. This date should only be past or present (cannot be in the future).

Screenshot:

Will & Succession planning
Define who governs your legacy.

Do you have a legally signed Will?
Written decree regarding asset division. ☒

Document Location
poiuygfd
Ensure a trusted executor knows how to retrieve it in an emergency.

Executor Name
Name of executor

Executor Contact
Phone or Email

Last Review/Update Date
04-07-2026

Special/Emergency Instructions
In case of emergency, contact [Name] at [Phone] immediately to retrieve safe keys and credentials...
Write instructions for your family on who to approach and what initial steps to take.

Expected Result: Error message: "Last review date cannot be in the future."

Actual Result: Future date is accepted without any validation error.

Impact: Incorrect data entry; will review tracking becomes inaccurate.

Suggested Fix: Add validation to prevent future dates in "Last Review/Update Date" field.

Display error message when user selects a date later than today.

Module 10 - Bhoomi

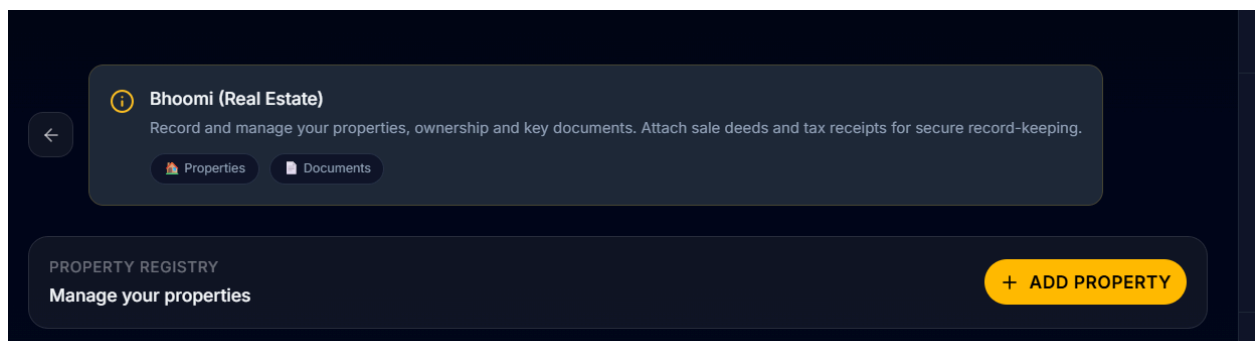

Bug 31

Bug Title: Bhoomi module header card length is shorter/inconsistent compared to other module cards

Severity: Low

Description: The Bhoomi module header card (with title, description, and Properties/Documents tabs) has a different length or width compared to other module cards in the application. It needs to be increased to match the standard size.

Screenshot:

Expected Result: Bhoomi header card should have consistent length/width as other module cards.

Actual Result: Card length is shorter or inconsistent.

Impact: Visual inconsistency across modules.

Suggested Fix: Adjust the CSS width/length of the Bhoomi header card to match the standard card size used in other modules (e.g., Kunji, Raksha, Rin). Ensure consistent max-width, padding, and responsive behavior.

Module 11 - Kar

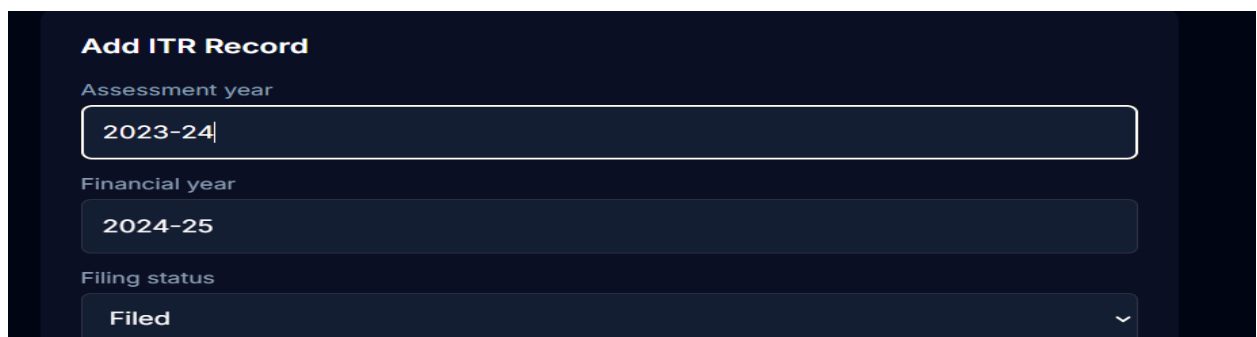

Bug 32

Bug Title: Assessment year and financial year fields lack proper calendar/year picker integration

Severity: Low

Description: The Assessment Year and Financial Year fields are text inputs that require manual entry in "YYYY-YY" format (e.g., 2024-25). There is no calendar or year picker to help users select the correct year, and no validation to ensure the format is correct.

Screenshot:

The screenshot displays a dark-themed form titled "Add ITR Record". It contains three input fields: "Assessment year" with the value "2023-24", "Financial year" with the value "2024-25", and "Filing status" with a dropdown menu showing "Filed".

Add ITR Record	
Assessment year	2023-24
Financial year	2024-25
Filing status	Filed

Expected Result: Users should be able to select years from a dropdown or year picker that displays years in "YYYY-YY" format. Input should be validated for correct format.

Actual Result: Free text field with no year picker; users can enter invalid formats.

Impact: Poor user experience; risk of incorrect year format entry.

Suggested Fix:

- Replace text inputs with year selection dropdowns (e.g., select from 2020-21 to 2030-31)
- Or use a custom year picker that outputs in "YYYY-YY" format
- Add validation to ensure correct format if text input is kept
- Pre-fill with current financial year as default

Bug 33

Module: Kar (Taxation) - ITR

Bug Title: Filing date future selection disables save button without showing error message

Severity: Medium

Description: When user selects a future date in the Filing Date field, the Save button becomes disabled but no error message is displayed. The user cannot understand why the button is disabled or how to fix it.

Screenshot:

Filing date

11-07-2026

Upload document

Tap to browse or drag & drop

Images & PDFs • Stored on this device

Cancel Save

Expected Result: System should display a clear error message: "Filing date cannot be in the future. Please select a past or present date."

Actual Result: Save button is disabled without any explanation.

Impact: User confusion; unable to submit form without knowing the issue.

Suggested Fix: Add validation message that appears when filing date is in the future. Show error text below the date field. Enable save button only when date is valid (past or present). Do not just disable button silently.

Bug 34

Module: Kar (Taxation) - ITR

Bug Title: Uploaded ITR document cannot be viewed - Google Drive file not found

Severity: Medium

Description: When user uploads a document for an ITR record and tries to view it, Google Drive returns "Sorry, the file you have requested does not exist" error. The file reference is saved but the actual file is not accessible.

Screenshot:

Sorry, the file you have requested does not exist.

Make sure that you have the correct URL and the file exists.

Get stuff done with Google Drive

Apps in Google Drive make it easy to create, store
and share online documents, spreadsheets,
presentations and more.

Learn more at drive.google.com/start/apps.

Expected Result: Uploaded document should be accessible and viewable/downloadable from the ITR record.

Actual Result: Google Drive shows file not found error.

Impact: User cannot view or access uploaded ITR documents.

Suggested Fix: Check Google Drive upload logic for ITR module. Ensure file is properly saved and file ID is correctly stored. Verify download URL generation.

This issue is similar to Bug 24 (Insurance) and Bug 25 (Loan), so fix should be applied consistently across all modules.

Bug 35

Module: Kar (Taxation) - GST

Bug Title: Validation errors for all fields appear immediately when one field has error, without user attempting to save

Severity: Medium

Description: In the GST form, when user selects a future date for "Last Filing Date", error messages for ALL fields (Business name, filing frequency, next due date, status, etc.) appear immediately, even though the user has not clicked Save. Validation should only trigger on form submission or field blur, not for all fields at once.

Screenshot:

The screenshot shows a dark-themed form with the following fields and error messages:

- GSTIN**: 15-character GSTIN. Error: *GSTIN is required.*
- Business name**: Business name. Error: *Business name is required.*
- Filing frequency**: Select filing frequency. Error: *Filing frequency is required.*
- Last filing date**: 27-06-2026. Error: *Last filing date cannot be in the future.*
- Next due date**: dd-mm-yyyy. Error: *Next due date is required.*
- GSTR-1 Filed?**: Select. Error: *GSTR-1 filed status is required.*

Expected Result: Validation errors should only appear when:

- User clicks Save button, OR
- User leaves a field (onBlur)

Only the field with the specific error should show message.

Actual Result: One field error triggers validation for all required fields simultaneously, overwhelming the user.

Impact: Poor user experience; user sees many error messages at once without attempting to save.

Suggested Fix:

- Only validate fields on form submission or on field blur
- Do not validate all fields when only one field has an error
- Show errors only for fields that have been touched or attempted to save
- Use onBlur validation instead of real-time validation for all fields

Bug 36

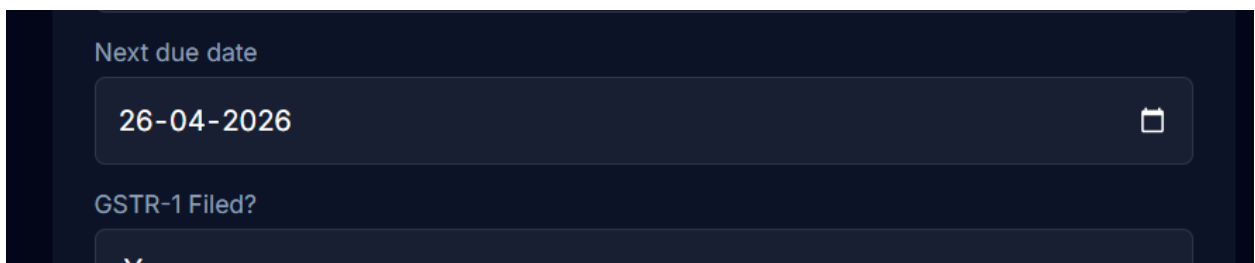

Module: Kar (Taxation) - GST

Bug Title: Next due date accepts past dates without validation

Severity: Medium

Description: In the GST form, the "Next Due Date" field accepts past dates. The next due date should be today or a future date (cannot be in the past).

Screenshot:

A screenshot of a software interface for GST filing. It shows a dark-themed form with two visible sections. The first section is titled 'Next due date' in a light blue font. Below the title is a text input field containing the date '26-04-2026'. To the right of the input field is a small calendar icon. The second section is titled 'GSTR-1 Filed?' in a light blue font. Below this title is a text input field containing the word 'Yes'.

Expected Result: Error message: "Next due date cannot be in the past."

Actual Result: Past date is accepted without any validation error.

Impact: Incorrect data entry; GST filing reminders become inaccurate.

Suggested Fix: Add validation to prevent past dates in next due date field. Display error message when user selects a date earlier than today.

Bug 37

Module: Kar (Taxation) - DIN

Bug Title: Save button disabled without showing error messages when form has validation issues

Severity: Medium

Description: In the DIN form, when user enters invalid data (e.g., DIN number with more than 8 digits, issue date in future, expiry date in past, DSC expiry date in past, director since date in future), the Save button becomes disabled without any error messages. User cannot understand what is wrong or which field needs correction.

Screenshot:

The screenshot shows a form with the following fields and values:

- Valid** (dropdown menu)
- DSC Expiry Date**: 28-12-2025
- MCA Filing Status**: Filed
- Director Since**: 09-06-2027
- Status**: Active

A modal dialog box is displayed at the bottom of the form, titled "Resume (1).pdf". It contains the following text:

- ✓ Saved to device
- Details saved successfully.
- Synced to Google Drive (toggle switch is on)

At the bottom right of the form, there are two buttons: "Cancel" and "Save".

Expected Result: Clear error messages should be displayed next to each invalid field, explaining the validation rule (e.g., "DIN number must be exactly 8 digits", "Issue date cannot be in future", "Expiry date cannot be in past", etc.)

Actual Result: Save button disabled silently. No error messages shown.

Impact: User cannot submit form and has no clue why; poor user experience.

Suggested Fix:

- Display validation error messages for each field when validation fails
- Show messages like:
 - "DIN number must be exactly 8 digits"
 - "Issue date cannot be in the future"
 - "Expiry date cannot be in the past"
 - "DSC expiry date cannot be in the past"
 - "Director since date cannot be in the future"
- Enable save button only when all validations pass
- Do not just disable button without explanation

Module 12 - Uttaradhikar

Bug 38

Module: Uttaradhikar (Succession) - Will & Executor

Bug Title: Executor contact field accepts more than 10 digits without validation

Severity: Medium

Description: In the Will & Executor page, the "Executor Contact" field accepts phone numbers longer than 10 digits (e.g., 20+ digits). It should validate that the contact number is exactly 10 digits (or at least 10 digits with proper format).

Screenshot:

Will declaration
Signed will exists

Expected Result: Error message: "Executor contact must be a valid 10-digit phone number."

Actual Result: Very long number is accepted without any validation error.

Impact: Incorrect contact data stored; executor cannot be reached in emergency.

Suggested Fix: Add validation to executor contact field:

- Required field
- Must be exactly 10 digits
- Numbers only (no letters/special characters)

- Display error message when validation fails
- Prevent save if validation fails

Bug 39

Module: Uttaradhikar (Succession) - Emergency Protocol

Bug Title: Emergency contact phone fields accept letters and invalid characters instead of only 10-digit numbers

Severity: Medium

Description: In the Emergency Protocol page, the "Primary contact phone" and "Secondary contact phone" fields accept letters, special characters, and invalid inputs. These fields should only accept 10-digit numeric phone numbers.

Screenshot:

The screenshot displays a dark-themed user interface for the 'Emergency Protocol' section. It is divided into two main columns. The left column contains the 'Emergency contact' section with fields for 'Primary contact name' (edrfgyhui), 'Primary contact phone' (ersdtfgyhuijo), 'Secondary contact name' (ertfgyh), and 'Secondary contact phone' (werdtfygh). Below this is the 'Asset access scope' section, which allows users to select specific estate areas for the contact to reach. The right column contains the 'Emergency readiness' section with fields for 'OTP VERIFIED' (Yes), 'CONTACT PHONE' (ersdtfgyhuijo), 'ACTIVATION DELAY' (24), and 'PROTECTED SCOPES' (None selected). At the bottom right is the 'Verification flow' section, which allows users to choose the method for validating the emergency contact (SMS, Email, or Both). The 'Email' option is currently selected.

Field	Value
Primary contact name	edrfgyhui
Primary contact phone	ersdtfgyhuijo
Secondary contact name	ertfgyh
Secondary contact phone	werdtfygh
OTP VERIFIED	Yes
CONTACT PHONE	ersdtfgyhuijo
ACTIVATION DELAY	24
PROTECTED SCOPES	None selected
Verification flow	Email

Expected Result: Error message: "Phone number must be a valid 10-digit number."

Only numbers 0-9 should be allowed.

Actual Result: Letters and invalid characters are accepted without validation.

Impact: Incorrect contact data stored; emergency contacts cannot be reached.

Suggested Fix:

- Add validation to both phone fields
- Only allow numeric input (0-9)
- Enforce exactly 10 digits
- Display error message when validation fails
- Prevent save if validation fails
